

FLAME RESISTANT / SOFTSHELL ELEMENTS™ JACKET – U.S. ARMY

Approved and issued by the U.S. Army as part of the FREE layering system, the Massif® Elements Jacket provides flame-resistant weather protection for a wide variety of cold and wet weather scenarios without sacrificing comfort or performance.

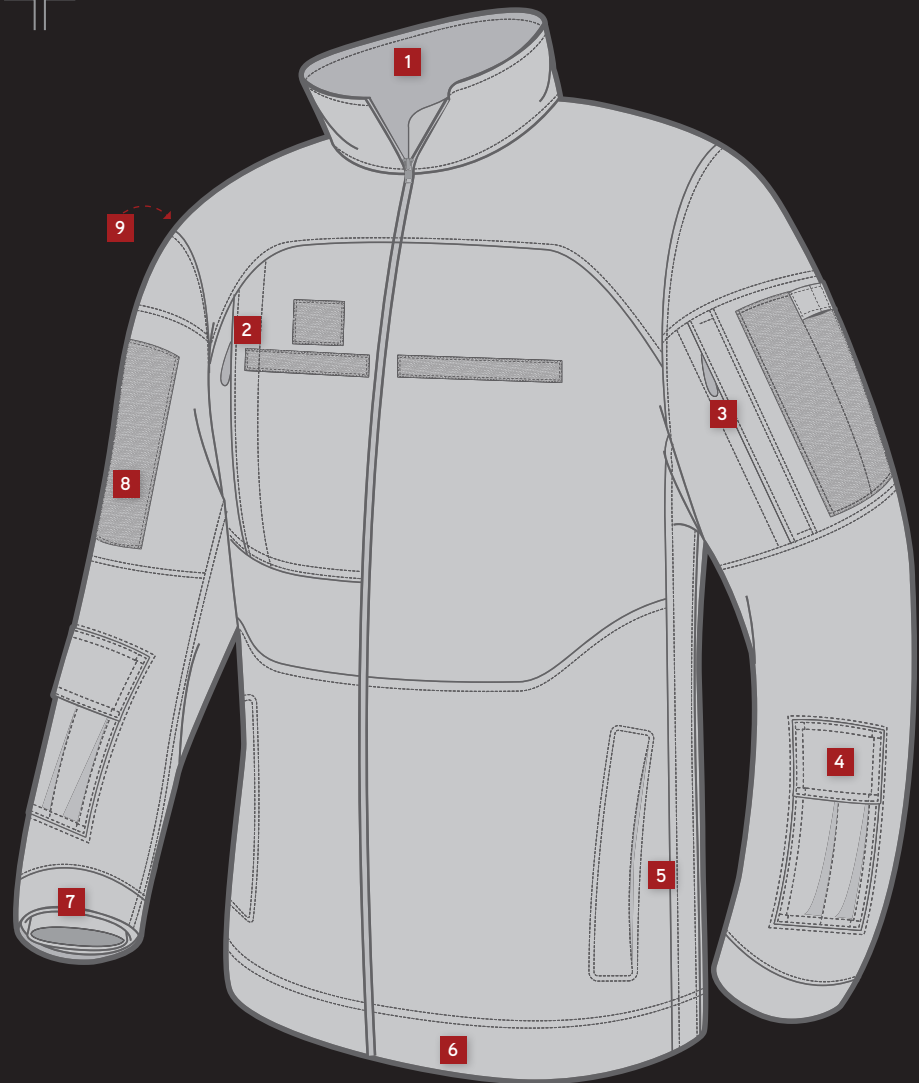

The Massif Elements Jacket has been field tested and proven by troops in some of the world's harshest environments. The three-layer fabric construction features an abrasion-resistant exterior, a windproof, waterproof, breathable membrane, and a soft fleece interior. The membrane keeps rain out, but allows moisture vapor to escape when you're working up a sweat. Four-way stretch ensures your Elements jacket moves with you every step of the way.

MADE IN THE USA

U.S. ARMY APPROVED – FREE LAYER 6 IWOL

MASSIF® FLAME RESISTANT TECHNOLOGY

Elements fabric passes the stringent ASTM F2302-03 performance specifications for flame resistance. In addition, Elements fabric exceeds flame and heat resistance performance requirements specified in the Radiant Protective Performance, Flame Resistance, and Heat and Thermal Shrinkage Resistance tests contained in the NFPA 1977-2005 protective clothing standard. Elements softshell fabric technology is proprietary to Massif.
